

PRACTICAL: ORAL CAVITY IN HEALTH

DIGITAL SLIDE DISCUSSION SPECIALIZED MUCOSA (TONGUE)

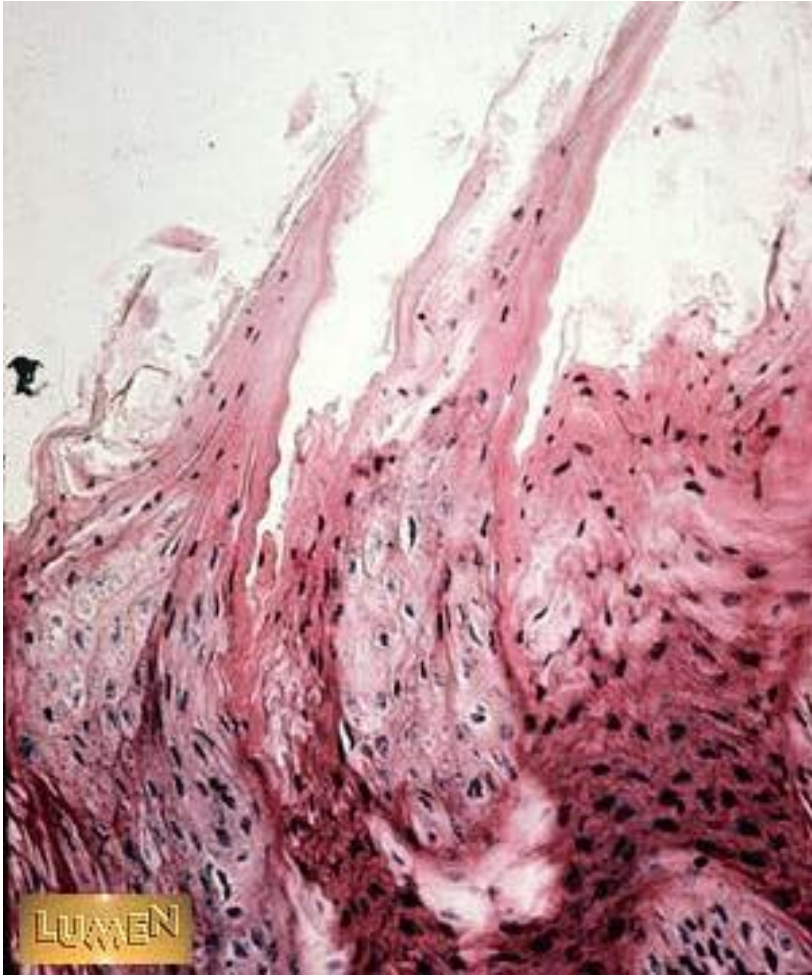

DR SAJDA GAJDHAR
COURSE CO-ORDINATOR

TONGUE

FILIFORM
PAPILLAE

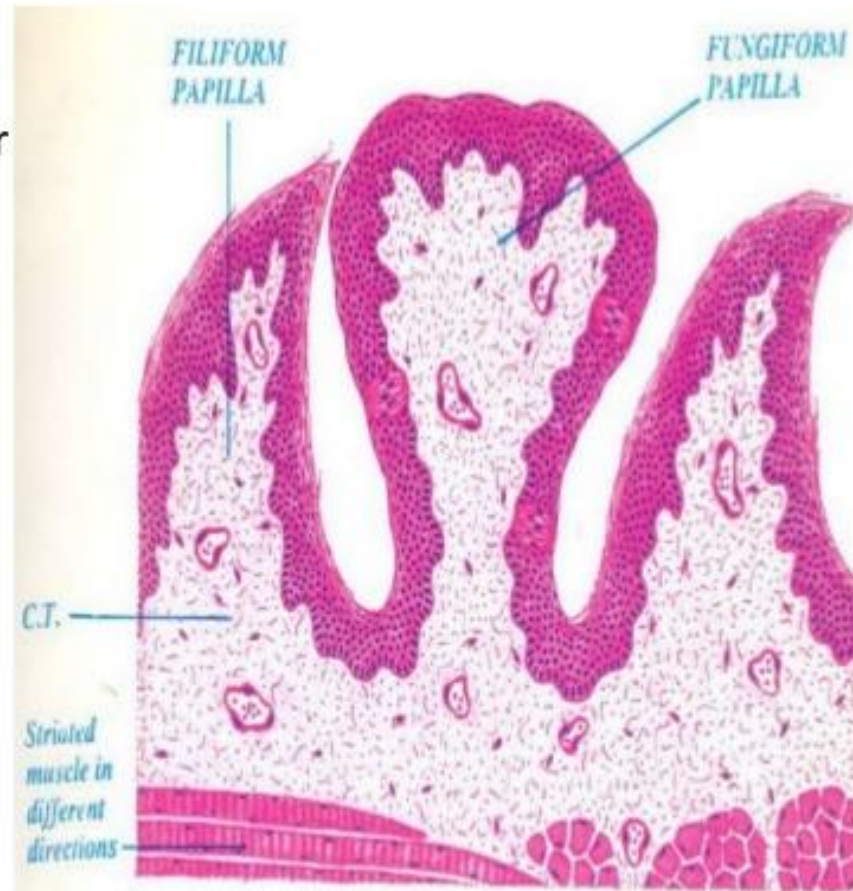

Higher magnification of tongue surface, showing two filiform papillae. They are obviously extensions of stratified squamous epithelium.

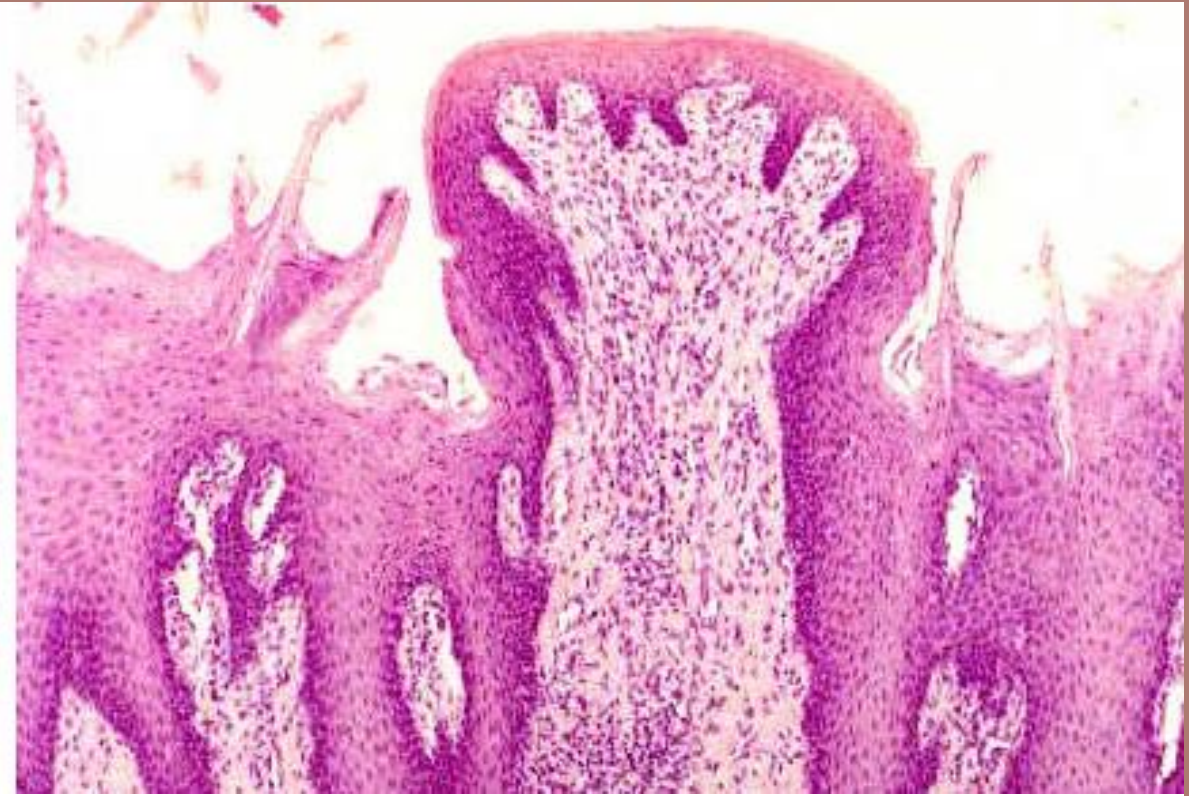

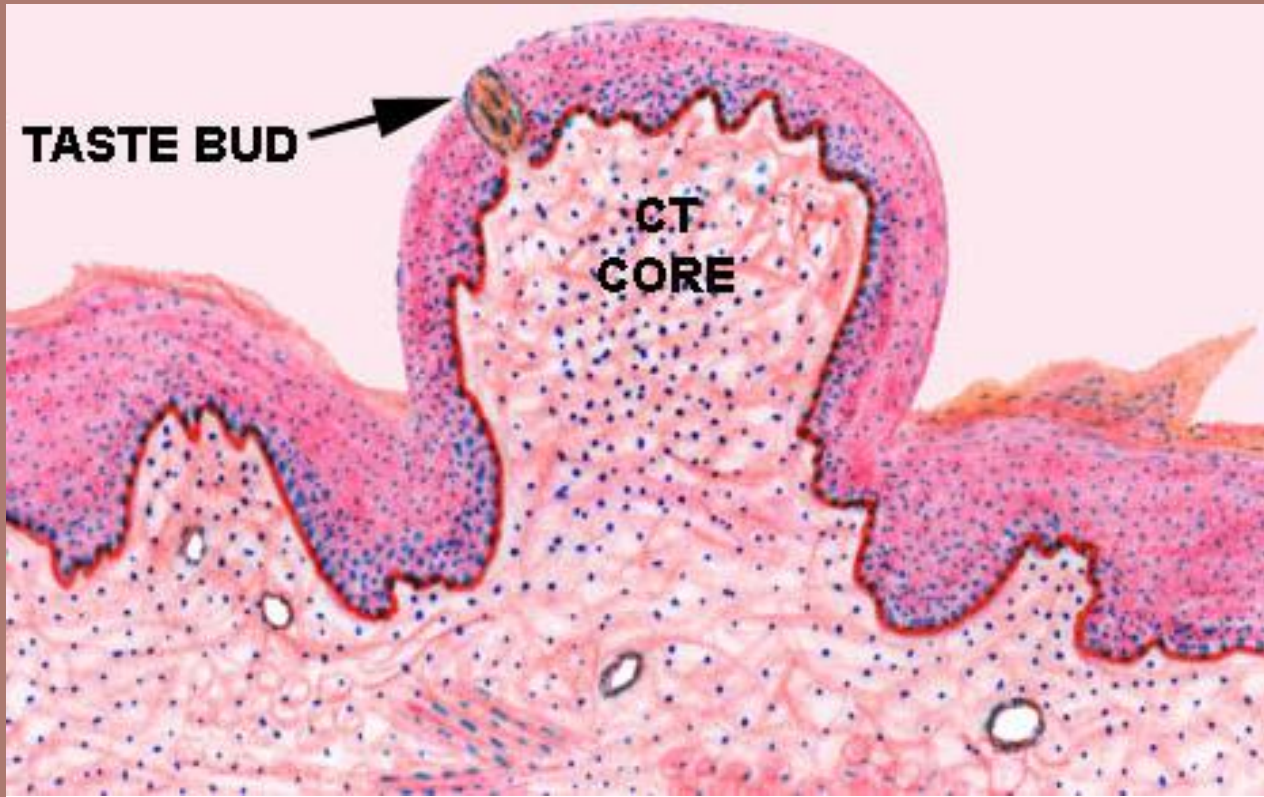

Filiform papillae (Cone-shaped)

- Most numerous; all over the tongue.
- No taste Buds

Fungiform papillae (Mushroom shaped)

- Less numerous; present on tip and sides of the tongue
- Has taste buds (Junqueira 2010).

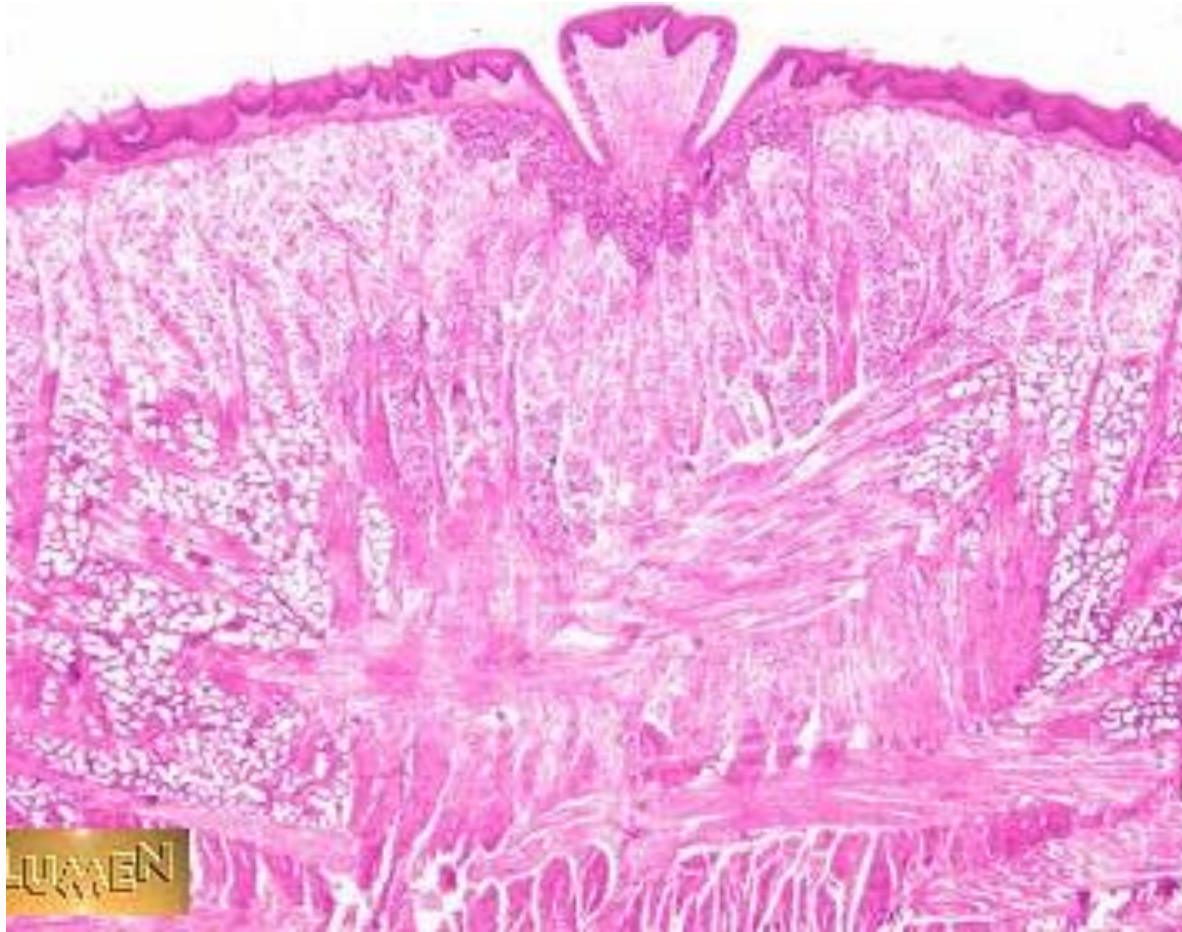

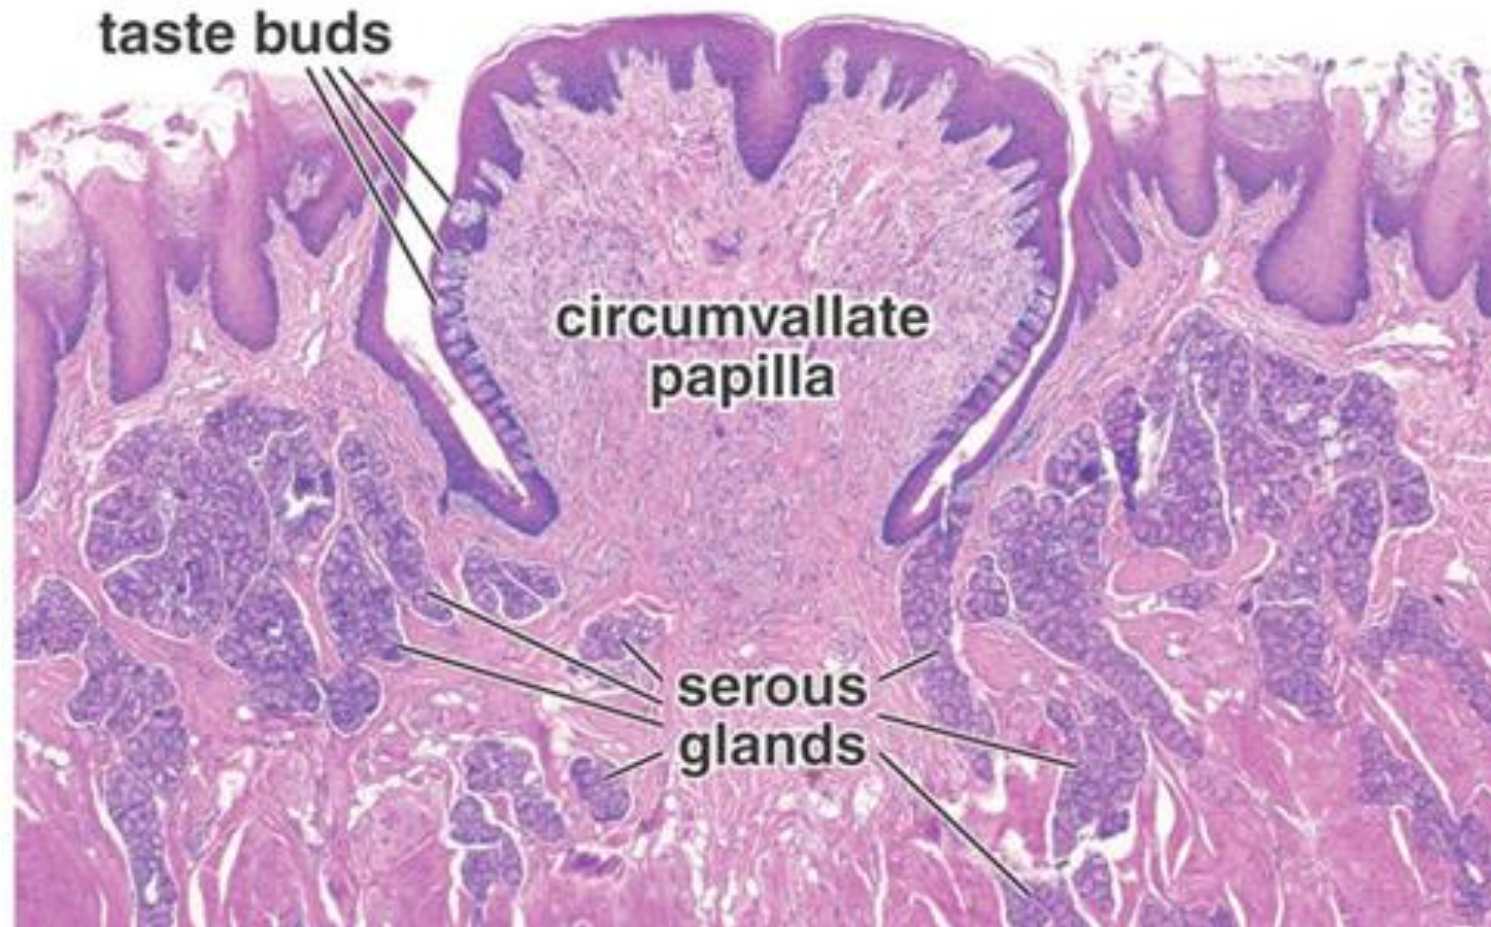

Fungiform papillae

Circumvallate pappila

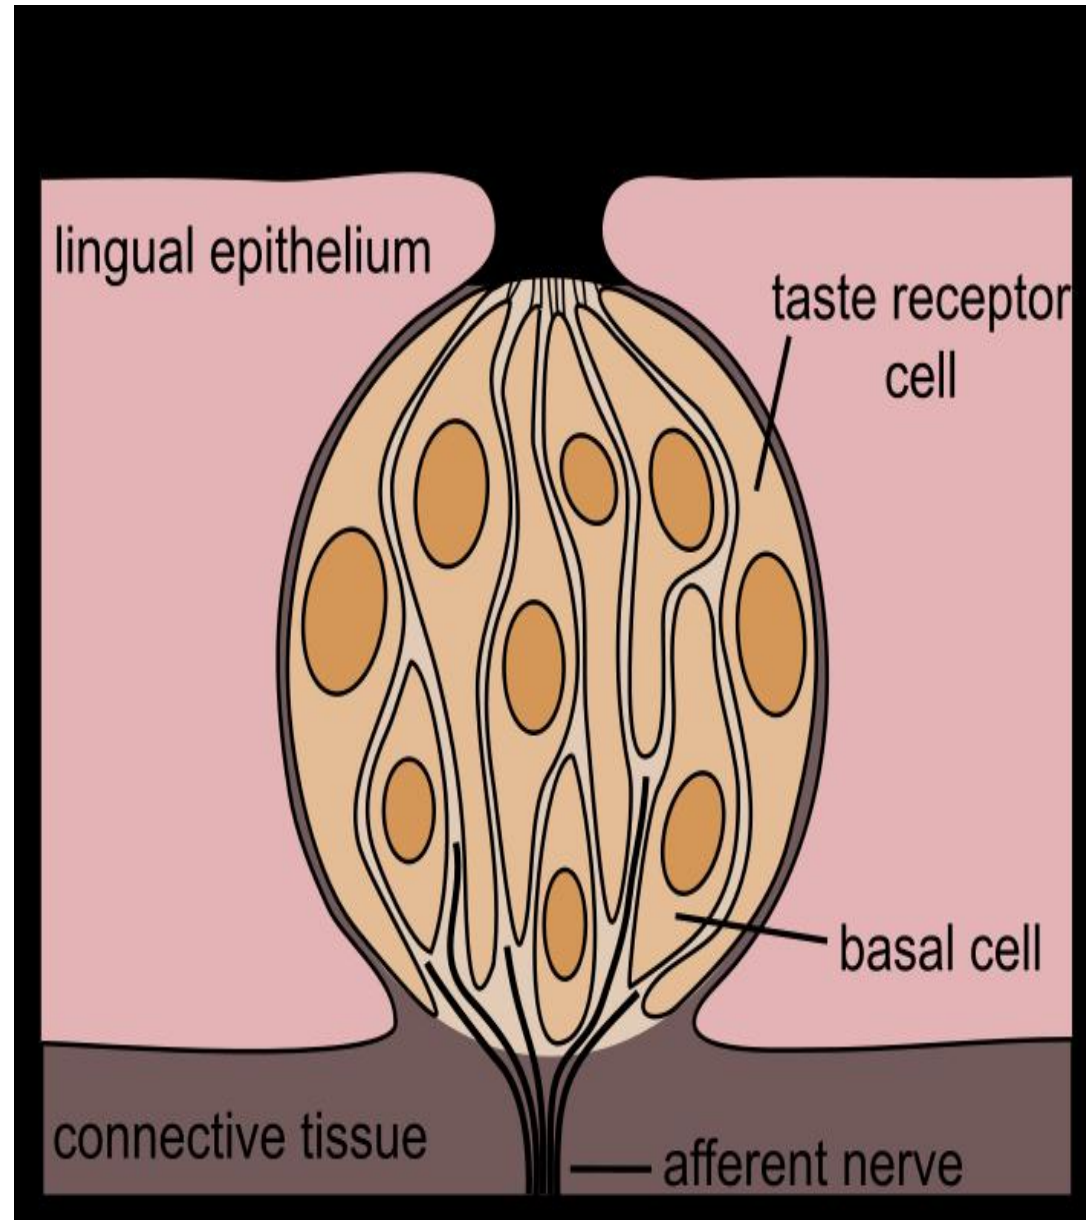

Section of tongue through circumvallate papilla. Notice glands immediately below it; also the interlacing skeletal muscle strands deeper in the section

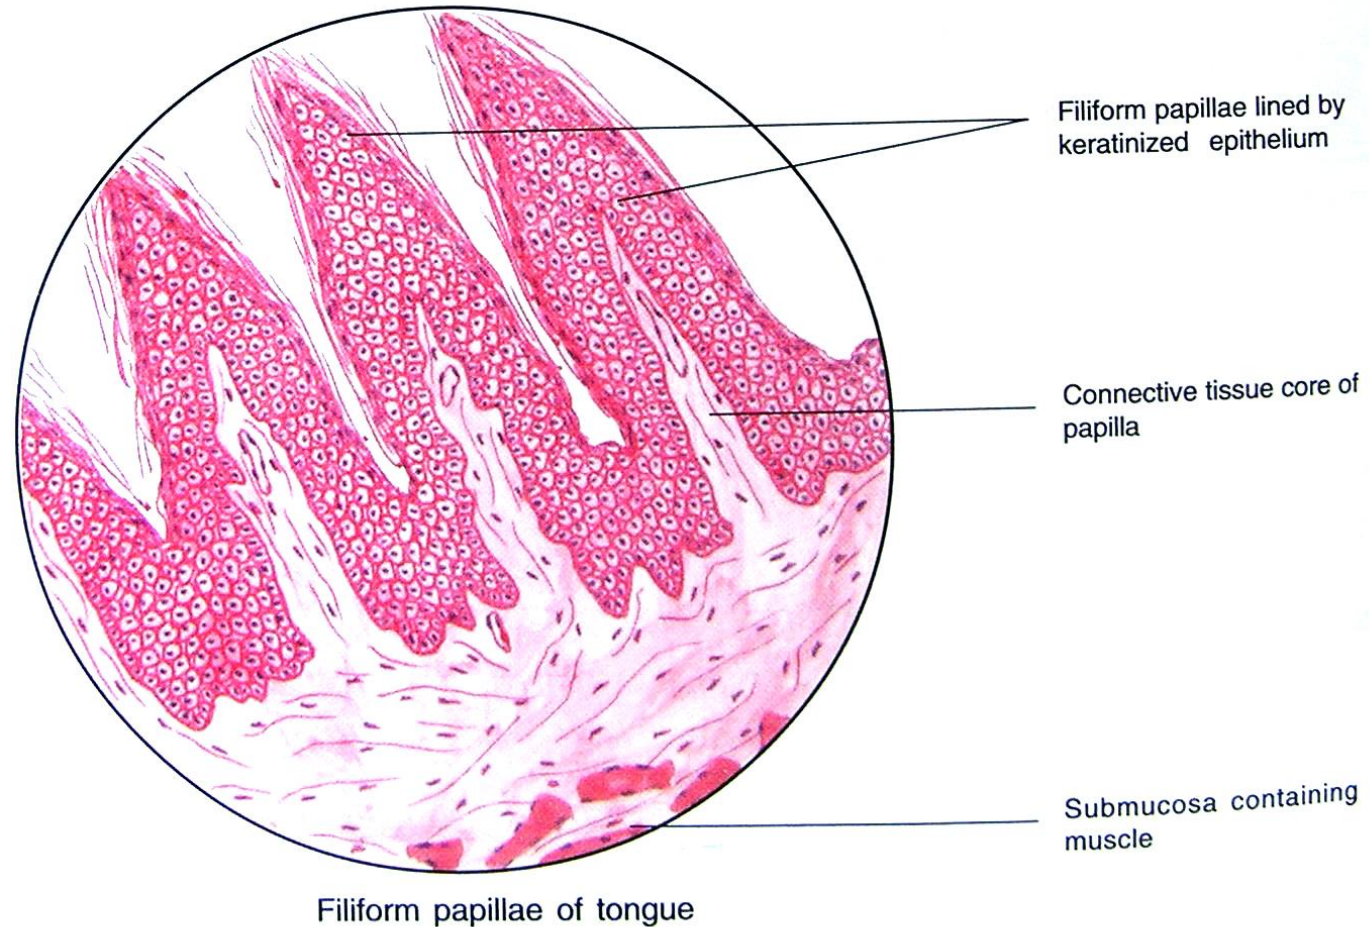

Detail of circumvallate papilla, showing pale taste buds opening into the lumen of the furrow that surrounds the papilla.

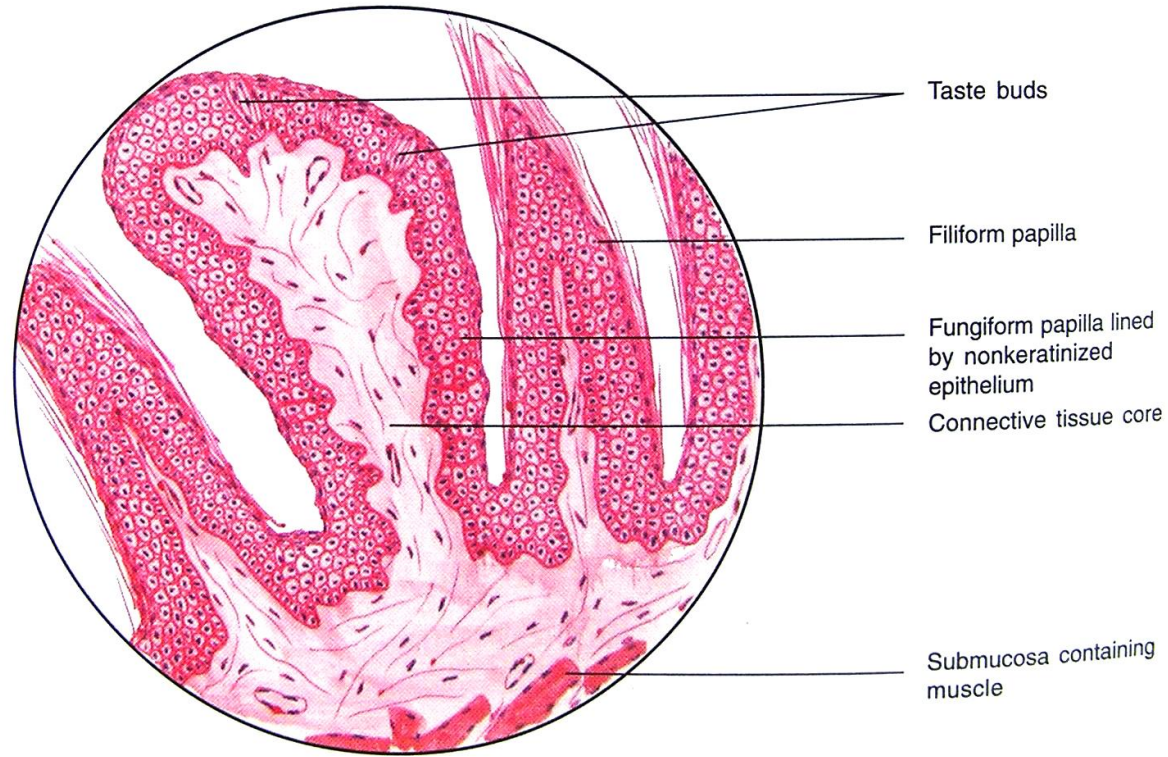

Higher magnification of taste buds.

Histology of filiform papilla

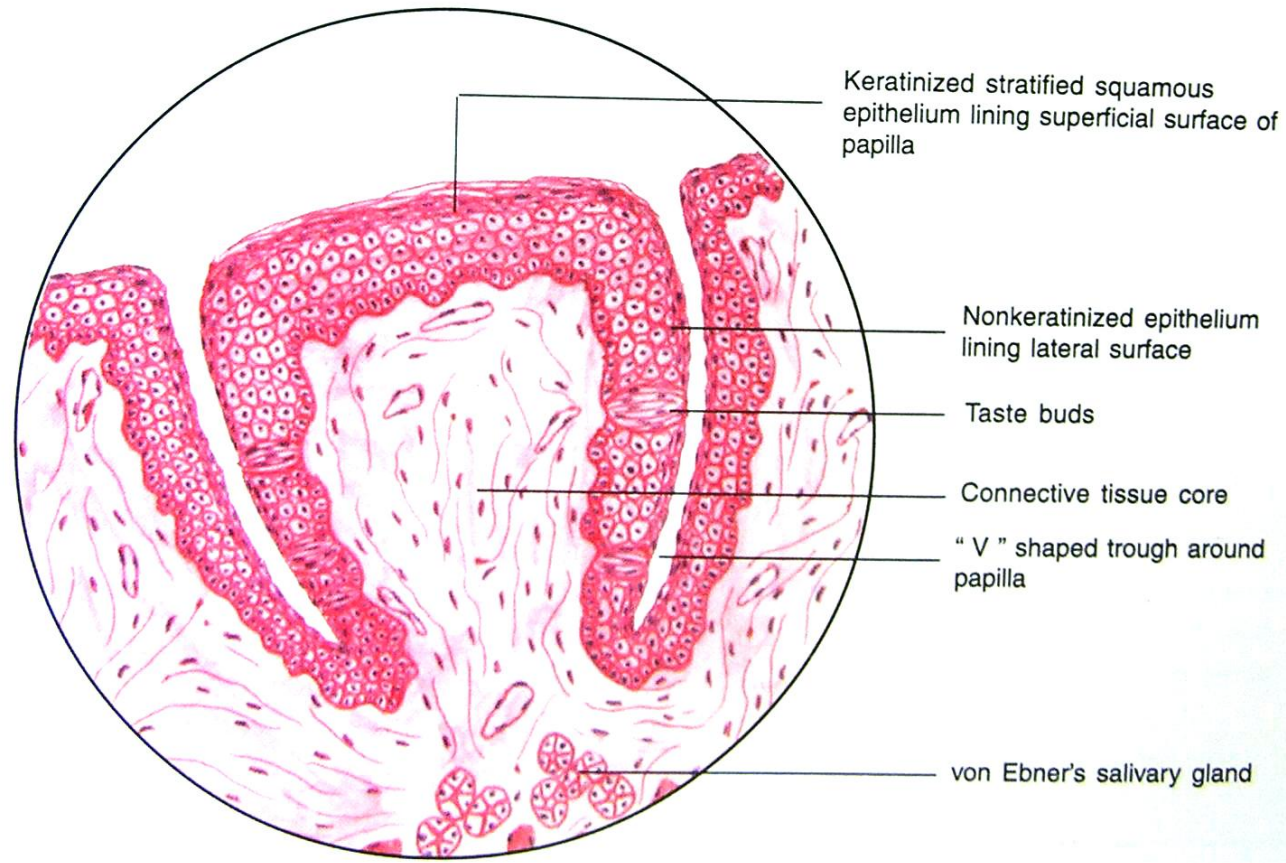

Histology of fungiform papilla

Fungiform papillae of tongue

Histology of circumvallate papilla

Circumvallate papilla of tongue
