

A thick black L-shaped frame is positioned around the text. It starts at the top left, goes right, then down, then right again, forming a partial rectangular border around the content.

MANAGEMENT OF HANDICAPPED PATIENT

**Reference: Chapter 22- Oral Health promotion with people with special
needs. Behavioral Dentistry. David I Mostofsky and Farida Fortune**

Lecture learning outcomes

- List the various strategies to prevent oral diseases among the people with special needs.
- Describe the various obstacles to oral health among people with special needs.

Index

- Introduction
- People with special needs
- How to provide adequate treatment for the special care
- Overcoming obstacles to oral health
- Information obstacles and methods to overcome the obstacles (Health care messages)
- Physical obstacles and methods to overcome the obstacles (Partial participation)
- Behavioral obstacles and methods to overcome the obstacles (Structuring the environment, Involving the individual, Counseling the caregiver, Reinforcers, social rewards)
- Organizational obstacles and methods to overcome the obstacles (Institutional settings)
- Putting all together (Plan for special care)
- Advantages
- Conclusion

Introduction

- People with special needs refers to those individuals who have barriers to achieving good oral health primarily because of a disability or medical condition

Reference: Chapter 22- Oral Health promotion with people with special needs. Behavioral Dentistry by David I Mostofsky and Farida Fortune. Page 338

Who are people with special needs?

■ These include:

Elderly

People who have disabilities

**People with complex medical,
physical, and psychological problems**

People with special needs have

More dental
disease

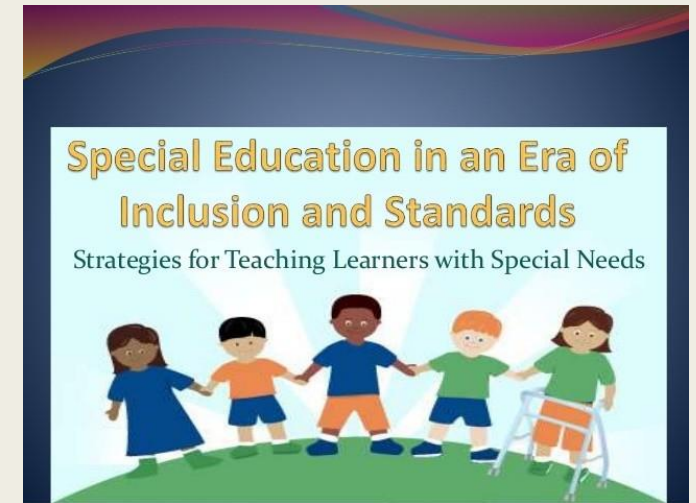

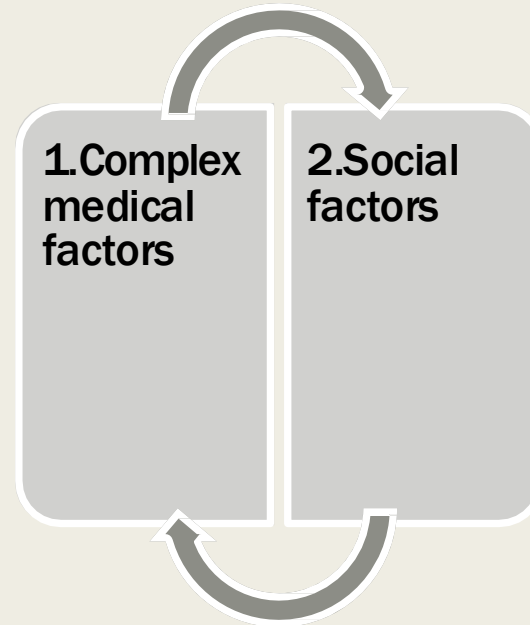

More missing
teeth

More difficulty
obtaining
dental care
than other
segments of
the
population

How to provide adequate treatment for the special care?

- Balance between

Challenges with the special care individuals

- Xerostomia, which is a side effect of many medications used by people in this group

Reference: Chapter 22- Oral Health promotion with people with special needs. Behavioral Dentistry by David I Mostofsky and Farida Fortune. Page 338

Reason for pain, suffering, and social stigma in special need populations

- Some caregivers are not themselves aware of the consequences of untreated dental disease and procedures to prevent dental diseases.

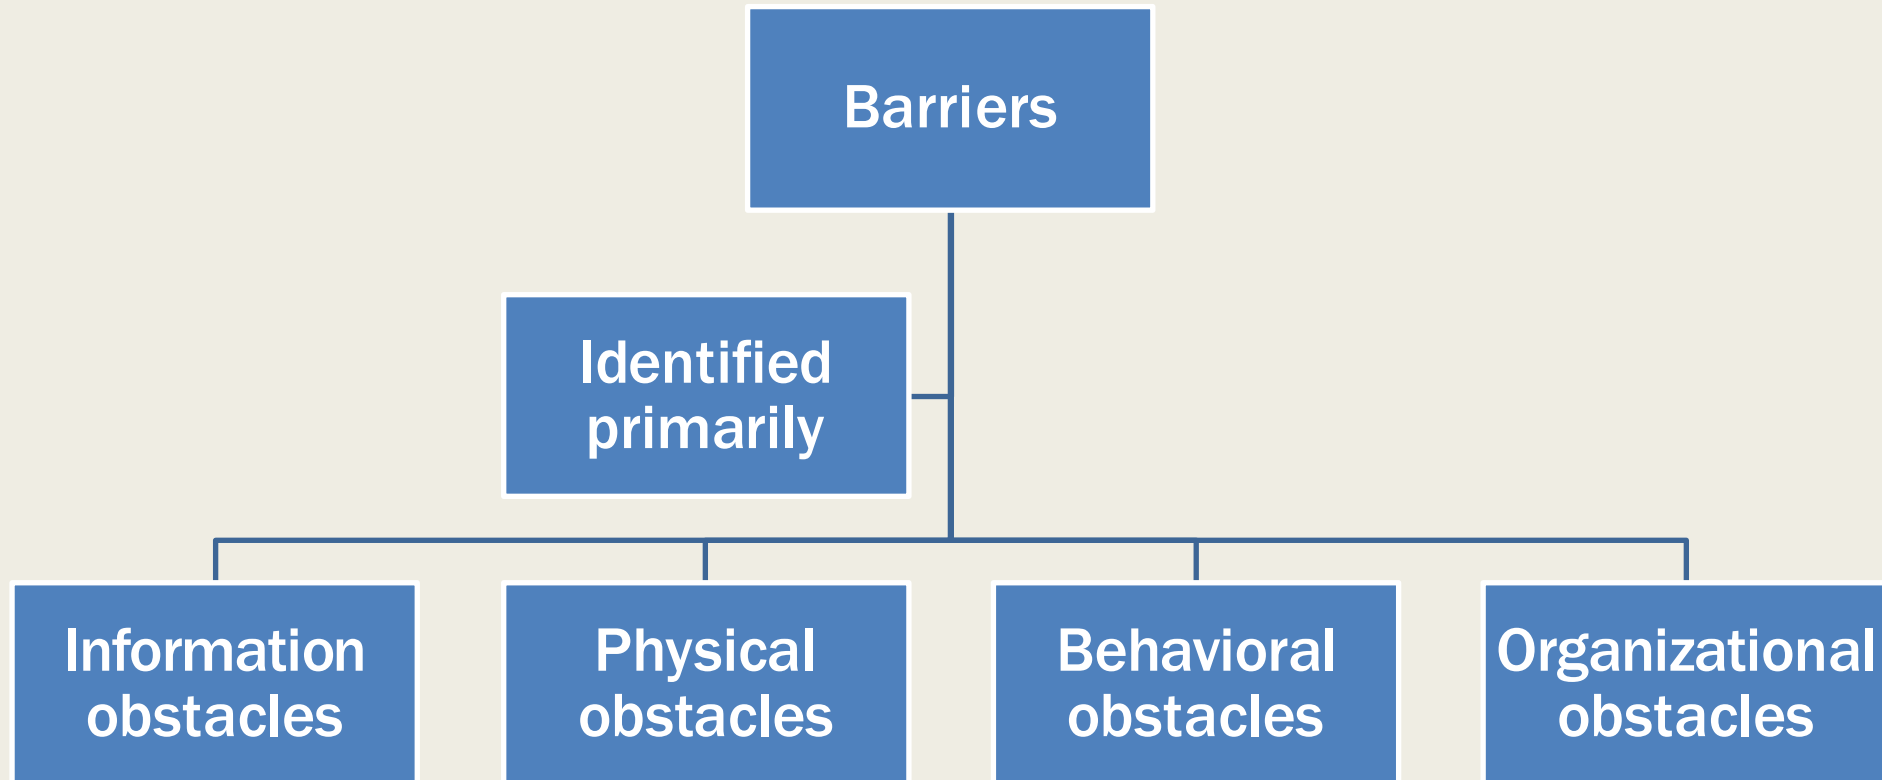

Focus should be on prevention for these special care individuals

- Difficulty in providing treatment for people with special needs makes this focus on prevention

Overcoming obstacles to oral health

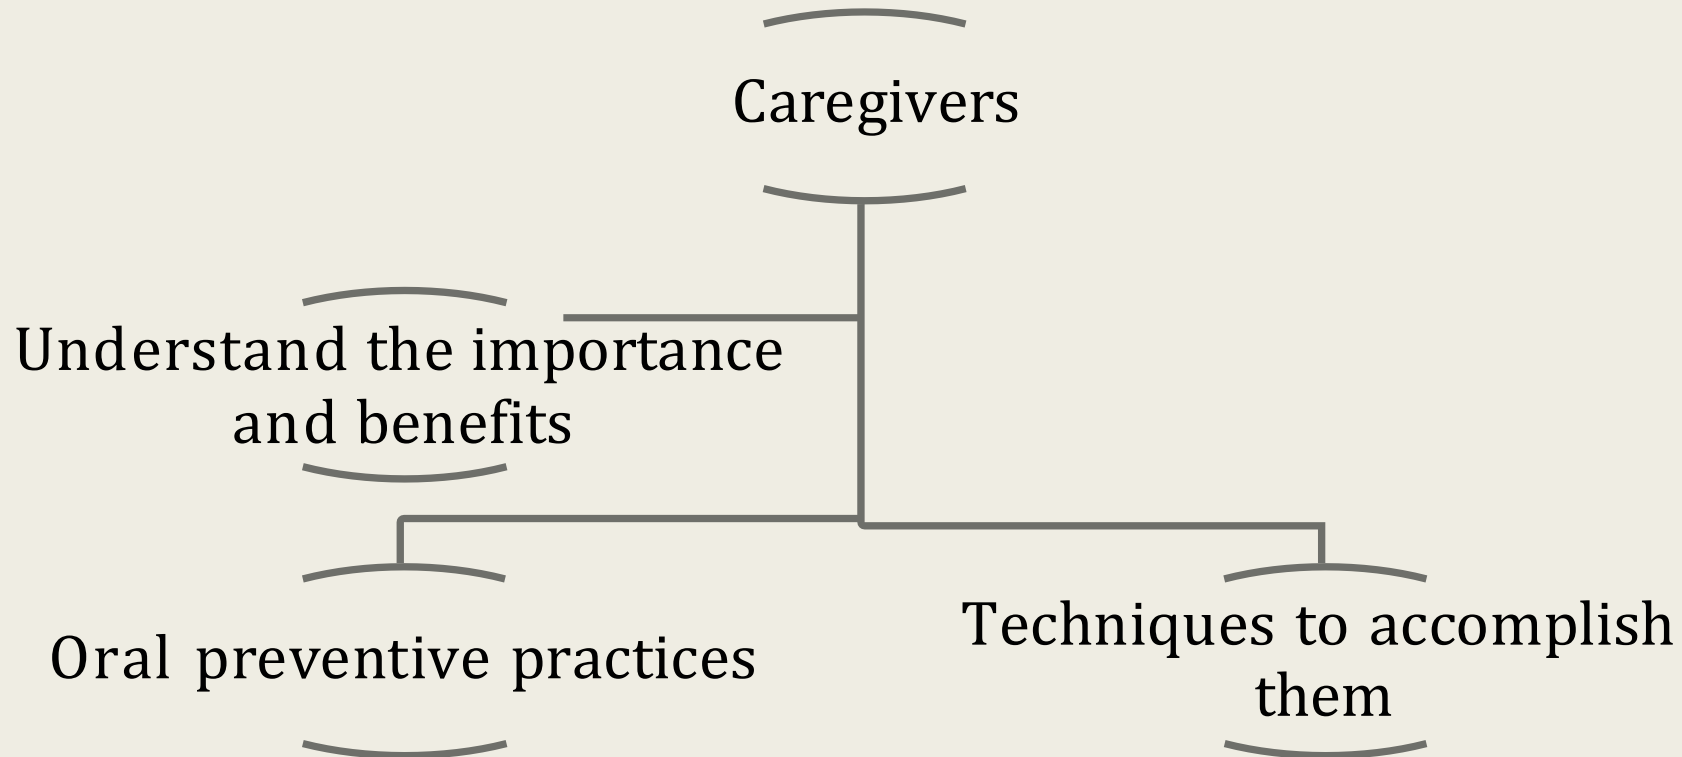

Information obstacles

- Does the individual or their caregivers understand what needs to be done?

Overcoming Information Obstacles

- Understand the importance and benefits of preventive dentistry.

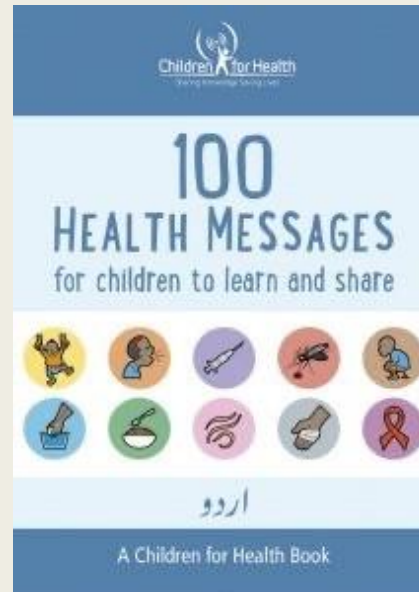

Traditionally

- The traditional short lesson on “oral hygiene” session delivered at the end of a dental appointment in a dental office may not have any impact on the subsequent behaviour of the individual or their caregivers

Delivery of health messages

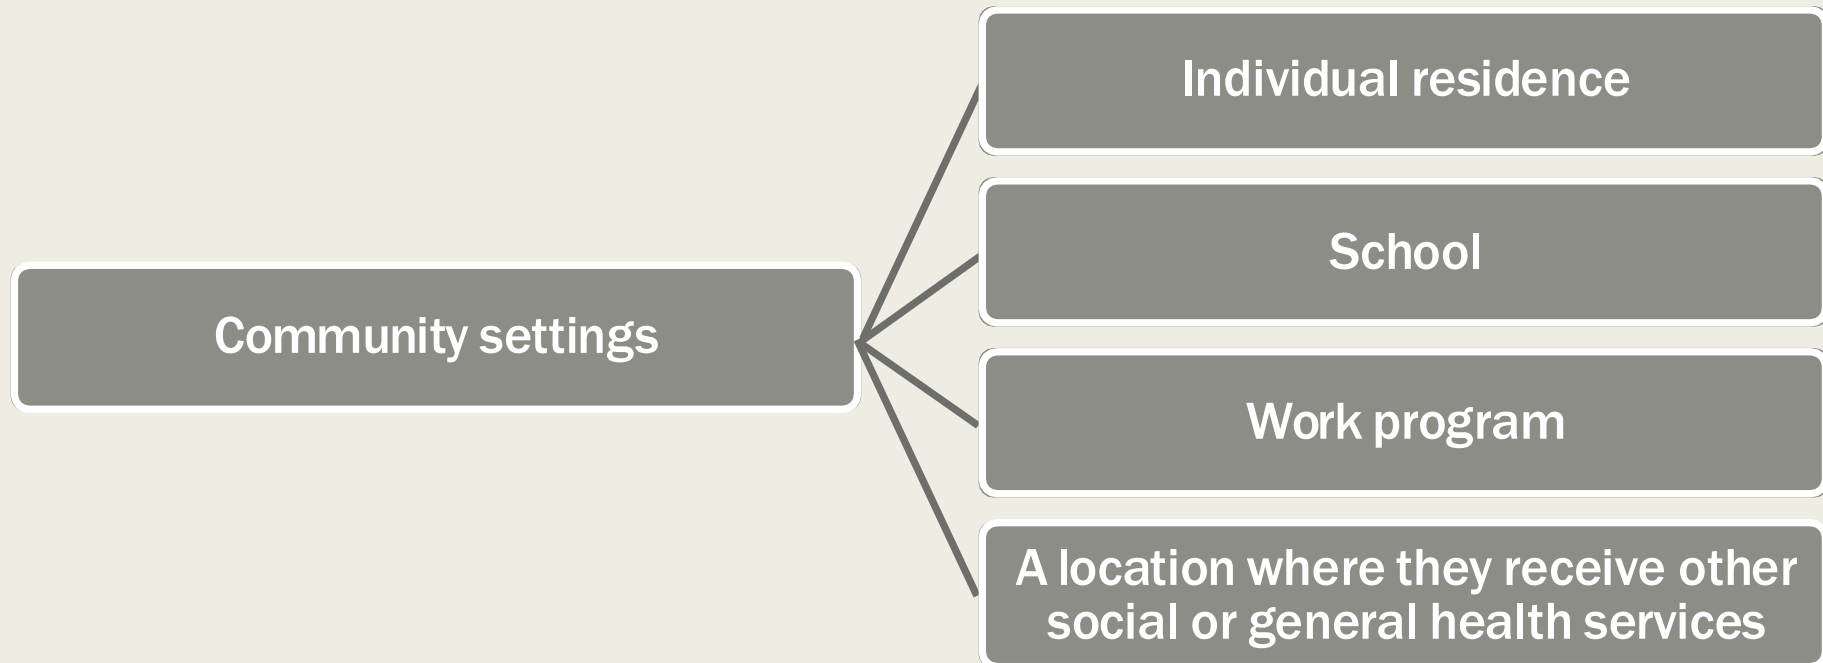

- It is critical to partnering with community-based resources.

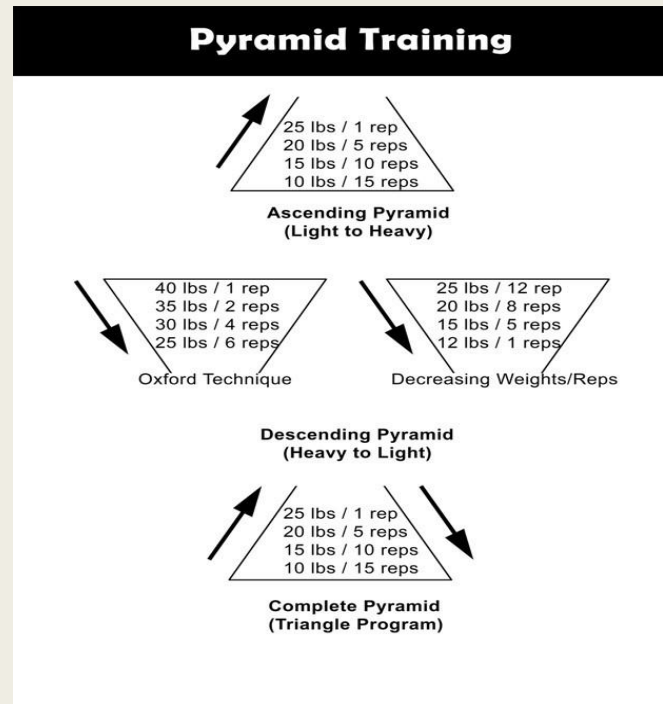

Effective health promotion messages

- Effective health promotion messages may best be delivered in a community setting.

“Pyramid” training program

- Dental professional trains a home health nurse or a residential facility manager on Overcoming Obstacles for special care individuals.

“Daily mouth care,” messages should have

Simple language

Refer to pictures and simple diagrams

Deliver small amount of information at one time

Testing, understanding, repeating information

Adding new information at subsequent sessions

Creating an environment where individuals or caregivers feel comfortable asking questions

What is critical in delivering messages to the target special care audience?

- Tailor messages to the values and desires of the person you are talking to and it should translate to behavior change
- For example, motivational interviewing

Physical obstacles

- Can the individual or their caregivers physically perform needed procedures?

Overcoming Physical Obstacles

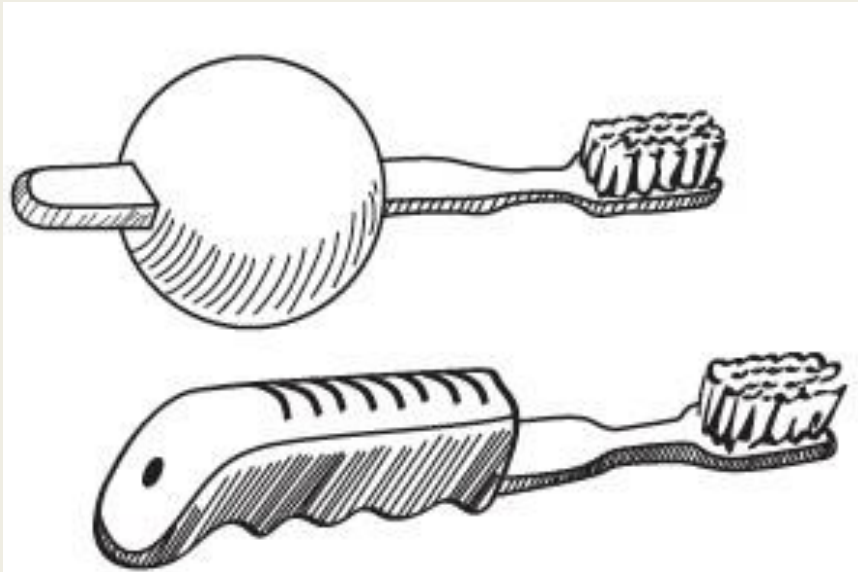

What are physical barriers?

- Special care individuals lack the musculature, dexterity, or coordination to do their works.
- Physical barrier example is simply the inability to grasp a toothbrush or to manipulate dental floss.

Numerous adaptations and aids that overcome these barriers

Toothbrushes that have been adapted with a larger handle using a tennis ball or bicycle handle grip.

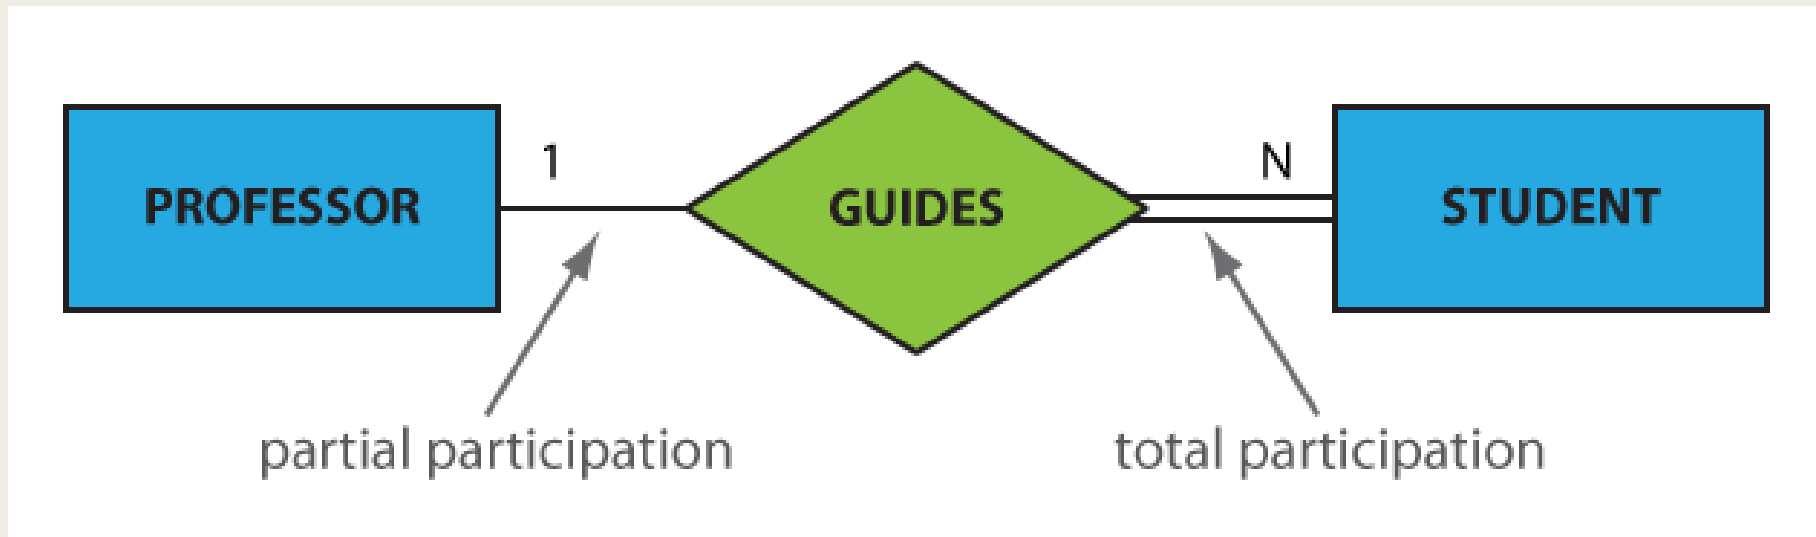

Someone with limited dexterity using a large foam ball as a means of picking up a toothbrush.

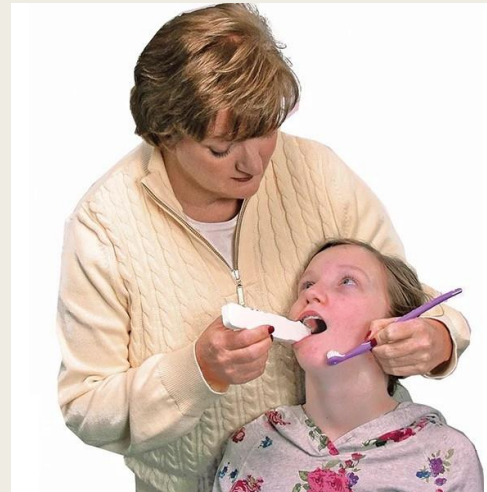

Partial participation

- This situation where the person does as much as they can and the caregiver does what the person cannot do is referred to as “partial participation.”

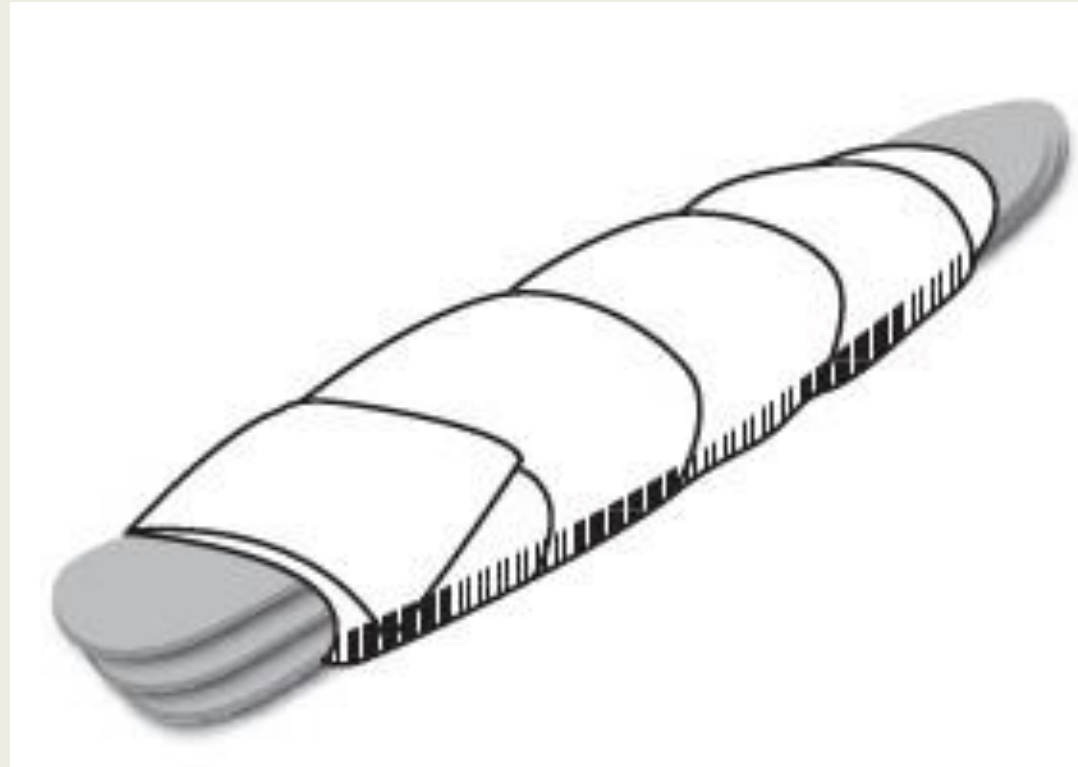

Technique of using partial participation

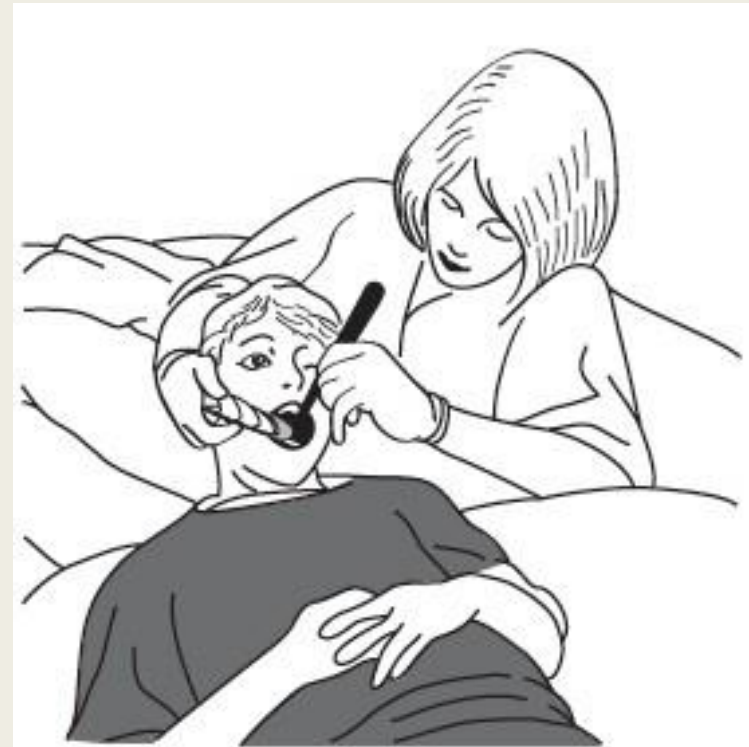

- Tongue blade mouth prop with someone who is sitting on the floor with their head resting on the caregiver's shoulders

“Tongue blade mouth prop.”

Partial participation- Using positioning and tongue blade mouth prop

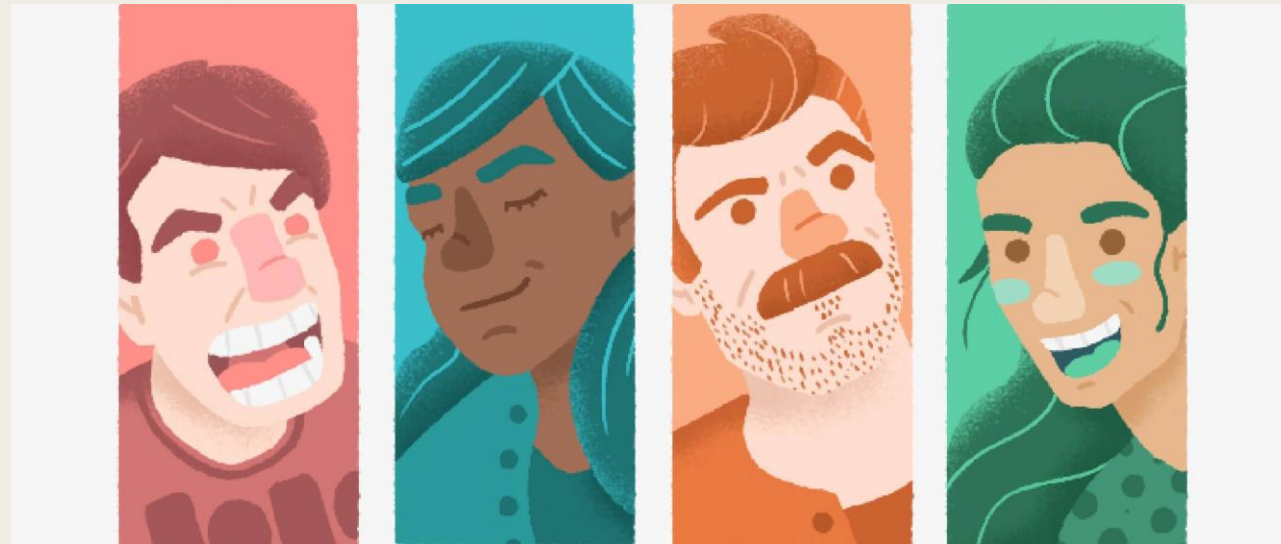

What is the role of dental professionals?

- Educating caregivers

Behavioral obstacles

- Is the individual resistant to performing or having someone else perform preventive procedures?

Overcoming Behavioral Obstacles

- There are a number of techniques utilizing: Overcoming Obstacles training materials.

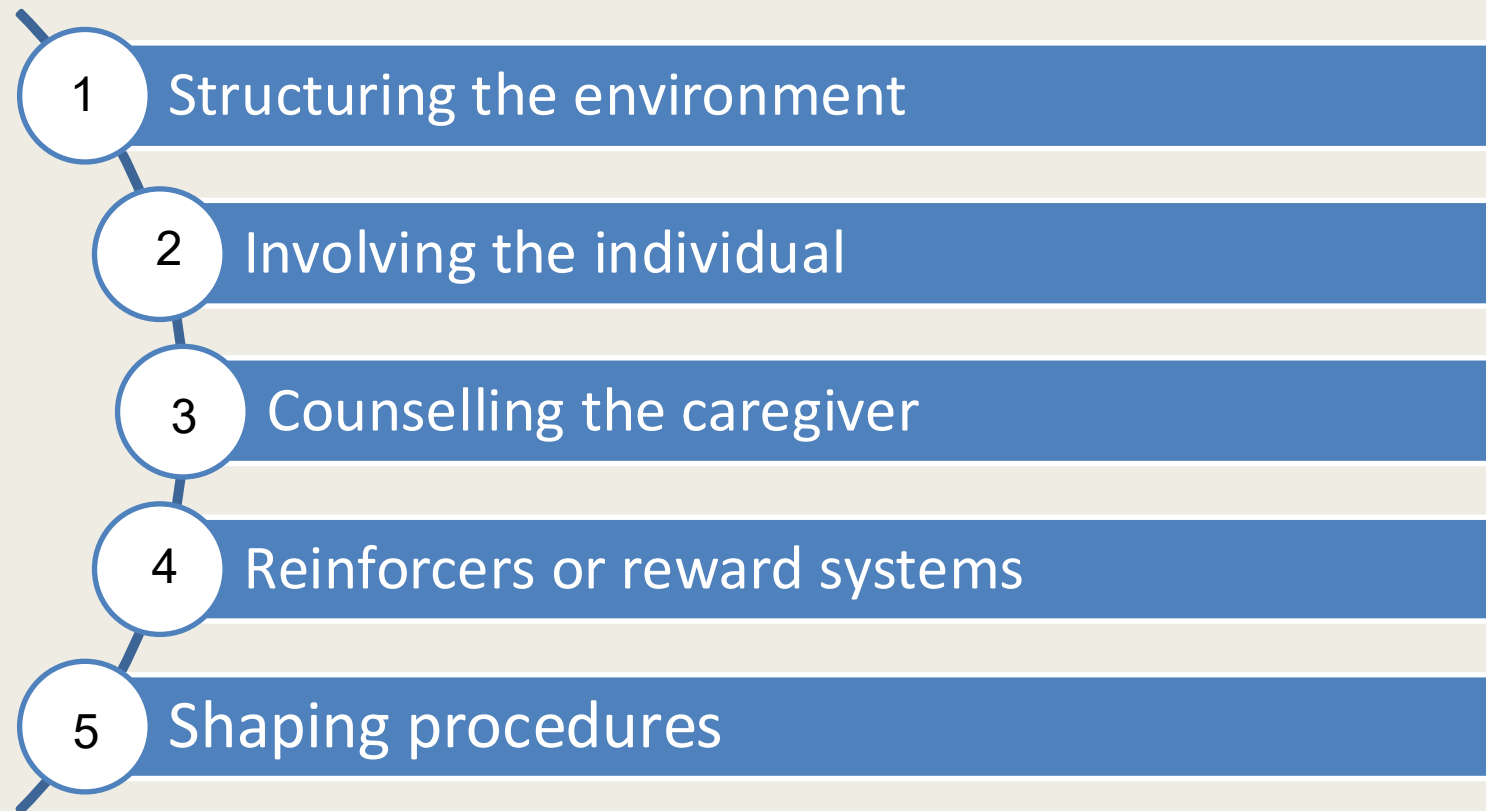

Role of dental professionals in overcoming obstacles

- The role of the dental professional is to work with the caregiver to educate the caregiver about the use of behavioral intervention strategies- Behavior support

Behavior support

“Structuring the environment.”

- It might include performing oral hygiene procedures in a setting that makes oral hygiene procedures seem fun.

How to structure environment?

- Get to know that individual and determine what type of environment would be conducive to a pleasant oral hygiene session

“Involving the individual.”

- Can aid cooperation of the handicapped individual.
- Increasing choices example is being able to choose when to brush one's teeth or what color a new toothbrush will be.

Counseling the caregiver

- Involves counseling the caregiver to pay attention to how the person is doing.

Reinforcers or reward systems

- A basic behavioral intervention is the use of reinforcers or reward systems
- A reinforcer is a method that will result in having the individual want to continue or increase the activity that produced the reward.

Social rewards

- Example like smiling and praise.

Shaping procedures

- Shaping is the reinforcement of an approximation of the task. If they would like someone to brush for 5 minutes, they might use a reinforcer after 30 seconds at first. Later, the reinforcer might not be used until 1 or 2 minutes have passed.

Behavioral intervention techniques simple and direct communication is important

- Establish eye contact.
- Use words and phrases that are perceived as helping not giving orders.
- Speak in a calm but friendly and firm voice using the individual's name frequently.
- Give one instruction at a time.
- Offer choices whenever possible.

**Behavioral
Intervention**

Organizational obstacles

- Is there a system in the home, community, or facility where the individual resides that can support and help them and their caregivers overcome the other three obstacles?

Overcoming Organizational Obstacles

- These institutional settings provide an opportunity to incorporate effective daily mouth care and preventive procedures.

Putting It All Together

- It is important to have a plan for applying the various techniques
- This plan will need to be communicated among a variety of people
- It is critical that these caregivers understand the strategy

Advantages of using a plan for the special care individuals

- First, it serves to help caregivers organize their thinking
- Second, it acts as a communication vehicle
- Finally, it acts as a record of progress.

			☐ Baking Soda			

OVERCOMING OBSTACLES TO ORAL HEALTH

Daily Mouth Care Plan (5/11/10)

CREATE -A- PLAN: PHYSICAL/BEHAVIOR PLAN

Level of Participation

- ☐ Full participation- Person independent
- ☐ Partial Participation- Can complete some tasks
- ☐ None- Person completely dependent

Prompts to use:

- ☐ Physical (hand-over-hand) ☐ Pointing
- ☐ Physical (touch) ☐ Verbal

CREATING CONDITIONS FOR SUCCESS

Person	Who will work with individual?	☐ Caregiver	☐ CNA	☐ Family Member
Place	Best position	☐ Bedside ☐ Couch	☐ Wheel-chair ☐ Recliner	☐ Bean bag chair ☐ Other _____
Time	Best time of day	AM _____	PM _____	Other _____

INDIVIDUAL NEEDS VARIABLES OCCUR LIFE VARIABLES EFFECT U T H E

List Choices offered: (Ex. Do you prefer the couch or bedside? Which flavor toothpaste?)

- A. _____
- B. _____
- C. _____

Limit Setting by individual: (Ex. I can brush the top teeth for 20 seconds, then you take over.)

- A. _____
- B. _____
- C. _____

List Rewards offered: (Ex. Keep rewards healthy- a TV show, xylitol mints, music, book)

- A. _____
- B. _____
- C. _____

Desensitization: Use gradual introduction (Ex. Start with the person holding a hair brush, then a toothbrush, then hold the toothbrush to the lips.) Steps being worked on:

1. _____
2. _____
3. _____

Shaping: Use rewards when a task is completed in the direction of a goal. (Ex. As the person completes each task, expect more from the next task before the reward is given.) Steps being worked on:

1. _____
2. _____
3. _____

PROFESSIONAL DENTAL CARE PLAN

Last dental cleaning appointment: Date _____ Next appointment date: _____

Dental Check-up recommended every: _____ Months Type of dental setting: ☐ Dental office--no special considerations ☐ Dental office (check one) ☐ No special support, ☐ oral/conscious/deep sedation

☐ behavior/physical supports ☐ Hospital or Surgi-center ☐ Will not tolerate any of the above settings(RDHAP)

Dental Provider Name: _____ PH: _____

Address: _____ Email: _____

Conclusion

- People with special needs have the most dental disease and the least access to treatment services of any segment of our population.
- It is critical that everything possible be done to prevent the occurrence of dental disease in these individuals.

Thank you
